INTRODUCTORY—TO BE READ.

The business of the Pomaria Nurseries has increased since its establishment, regularly, each year, in a most satisfactory manner, and the proprietor returns his warmest acknowledgments to his liberal customers, throughout the Southern States for patronage.

In preparing my new Descriptive Catalogue, great care has been observed to make it as complete as the space devoted would allow. I have given, first, a descriptive list of each variety as have been tested and found adapted to our climate. Then follows a brief description of other varieties which have been tested here, but not so generally disseminated, which will aid the purchaser in his selections.

In the Ornamental Department, the same care has been observed, and brief descriptions also given. It has been a constant desire to have in cultivation all the best varieties of Fruits, as well as Ornamental Evergreens, Trees, Shrubs, and Roses, which are suited to our climate, and to supply these of a thrifty growth and condition to my patrons. As I am "to the manor born," the proprietor trusts that persons about to plant will well give encouragement to their own Nursery at home before sending their patronage abroad.

Great care is taken to ensure correctness of fruits; but, as mistakes sometimes occur, they will, invariably, upon notice, *be rectified at my own expense.*

If Trees, Plants, &c., are ordered, by name, which cannot be supplied, I will invariably substitute *others, of a better quality or higher price, at the same charge*, unless specially directed otherwise.

All orders should be regularly and legibly written out in a

list, and not mixed up in the body of the letter; it avoids confusion, and prevents mistakes.

All Trees and Plants are carefully taken up, labelled, and packed in the best manner, for which a moderate charge is made.

Explicit directions for marking, should accompany the order. Where the mode of conveyance is left for us to choose, we shall exercise our own judgment; but in all cases, articles are at the risk of the purchaser after being shipped. Should loss or delay occur, the forwarders alone must be held responsible.

In Fruit, Shrubbery, and Flower stock, I always have on hand rare novelties, not embraced in my Catalogue, and from these such selections will be made.

The Nursery is situated $1\frac{1}{2}$ miles south of Pomaria Depot, on the Greenville and Columbia Rail-Road; and, upon being previously advised by letter, I will always have a carriage awaiting the arrival of any visitors, and will entertain them in rural style at my house during their stay.

WM. SUMMER.

INSTRUCTIONS, &C.

The proprietor, in presenting his new catalogue to the public, is induced to offer a few hints to persons commencing to plant orchards. In the first place, if they wish to secure healthy, well-formed trees, the ground must be well prepared, by good subsoil plowing to the depth of eighteen or twenty inches; and, if the soil is poor, a liberal dressing of well-decomposed manure will be indispensable.

The ground prepared, next proceed to dig your pits for planting, five feet in diameter, and twenty inches deep, then filling up half full with good surface mould. In planting the trees, if a compost of fresh woods earth, ashes or lime, be added, it will greatly aid in giving them a good start. Be careful to avoid deep planting, as nothing is more injurious. When finished, the neck of the tree should be slightly higher than the surrounding surface; the earth raised a little around the edge of the pits, so as to form a shallow basin round each tree—to prevent the water running off. In planting, be careful to spread out the roots regularly, spreading the soil from the stem outwards. When planted, fill up your pits, to within two inches of the top, giving each tree as much water as settles the earth thoroughly. In four or five hours, you can finish, by filling up entirely and treading moderately, as far as the roots extend. If, to this treatment, is added a good mulching of decayed leaves, bark, or saw-dust, around the trees, it will assist greatly in retaining the moisture, and consequently prevent the necessity of more than one or two good waterings.

Next in importance to careful planting is a proper pruning, to secure low, spreading tops, to protect the stems from our scorching sun, by which more fruit trees are killed than by any other cause, as nearly every orchard in the country will attest To

prune a tree up with a long bare stem is an outrage on nature. After the first year, the plow should not go close to the trees; a light forking over in winter, and the addition of a little fresh mulching will be a much better mode of treatment. For the first few years, they will require careful pruning every winter, shortening in the branches more or less, according to their strength; always cutting to a bud pointing outwards, on purpose to keep the head open in the centre.

In sending trees from the nursery, I will always send one or two pruned as they ought to be for planting. For standard trees, I consider two feet, or even less, abundantly high, and will be found not only conducive to the health of the trees, but also rendering them easier to prune and to gather the fruit from.

Dwarf trees, such as the pear on quince, apple on doucain and paradise stocks, the cherry on mahaleb, etc., the stems should not be more than fifteen to eighteen inches high. In receiving trees from the nursery, it will be necessary to remove the wired labels before the trees have grown much, as otherwise they may cut into the stems, and often seriously injure them. The names may be preserved by numbering and taking them down in a book.

Ornamental plants will generally succeed well in any ordinary garden soil. If poor, enriching with fresh surface soil and rotted leaves from the woods, avoiding the use of animal manures, especially for all those elegant evergreen trees, termed Coniferæ, such as Pines, Cedars, Cypress, etc. The remarks on planting fruit trees is equally applicable to these. For the more delicate varieties, a screen of Cedar branches on the south-west side, at a little distance from the plant, will be found of much advantage to them, especially the first season; it will prevent the evil effects of the sun, after a severe frost in winter, and its scorching rays in summer.

The *Cryptomeria Japonica* and the Deodar, African and Cedars of Lebanon, have proven to be most valuable and desirable Evergreens. The Norway spruce is also beautiful and hardy, bearing transplanting readily, and with the new Golden Arbor

Vitæ, the Chilian Silver Arbor Vitæ, and the Nepaul Arbor Vitæ, all beautiful and highly ornamental, seem to be perfectly at home in our climate. Other new and valuable Evergreens will be tested every year, and, as found adapted to our wants, will be disseminated.

The varieties of fruits have been selected with great care, and it has been the constant endeavor of the proprietor to cultivate only such as are adapted to our climate, and his experience and observation has been more extensive than any other private cultivator in the South. Specimen orchards, now numbering thousands of trees, including 500 varieties of the Apple, 800 of Pears, over 300 of Peaches, 100 of Plums, 70 of Cherries, 15 of Apricots, and the same of Nectarines, have been planted, and most of them fruited here. These, with many hundred foreign varieties of the Pear have, been procured and, as tested, are propagated in the nursery.

The late Northern varieties of the Apple prove early autumn kinds, and to supply this defect, the best native Southern kinds have been procured. These can be recommended with confidence.

I have now added to my list of Peaches choice Southern kinds, which keep up a good succession, from the ripening of the earliest until frost; and many new kinds are in bud, and will be for sale the next season.

The Pear, either as a standard or as dwarfs, is well adapted to our climate, and I can, with the greatest confidence, recommend the culture of this delicious and wholesome fruit.

DWARF PEARS.—In ordering Pear trees, I would observe to purchasers that some of the varieties do not succeed on the quince; but as I use no other stock but the Angers Quince, which grows more vigorously than where it was produced, I find nearly all of the choicest and best varieties do. Dwarf Pears should be planted deep enough to cover the point of union two or three inches. This will cause roots in time to be thrown out from the Pear, and thus secure fruitfulness and vigor.

I am prepared to send out fine and vigorous trees, which will

give entire satisfaction where grown. It will be necessary to indicate the number of each kind wanted—dwarfs or standards. The Cherry succeeds best in all locations with us, when grown upon Mahaleb stock. I have imported this largely, and have now all the finest varieties propagated upon it.

Those unacquainted with the various kinds, will find it to their advantage to leave the selection to me, when I shall endeavor to do them justice.

All trees will be carefully packed, to insure safe transport. For greater certainty and despatch, I have made arrangements with Adams & Co's Express, to forward packages on all the lines where they have agents. Persons wishing their trees sent by another conveyance, will please mention it in their orders.

Messrs Ingraham & Webb, are my Agents in Charleston, Dr. C. H. Miot and R. M. Stokes, Columbia, and Messrs. Roux & Co., Fernandina, Florida. All orders left with them, or packages consigned to their care will meet with prompt attention.

On despatching packages, receipts will be taken and sent with the bill, after which they are at the risk of the purchaser.

Trees cannot be taken up with safety, for transplanting in our climate, until the 20th of November.

Early orders are respectfully solicited, and will be promptly attended to, by addressing

WILLIAM SUMMER, *Pomaria, S. C.*

NOTE.—I would inform those who have made the inquiry that there is not a root of *nut grass* in my nursery, neither have I any person associated with me in the nursery business, either in propagating or in hawking about trees for sale.

All orders are filled at the nursery under my own care.

W. S.

CATALOGUE.

A P P L E S .

Descriptive List of Apples fruited at Pomaria, and adapted to the Cotton Belt of South Carolina.

EARLY MAY—Small, ripe 20th May, the earliest variety ; excellent for cooking ; tree a slow grower, but productive.

RED ASTRACHAN—Medium to large, ripe early in June, beautiful and of fair quality ; valuable for market, its crimson color and rich bloom, making it very attractive ; tree a good grower and productive.

EARLY HARVEST—Above medium, always regular in form, ripe early in June, one of the best early varieties ; valuable for the table and for cooking ; tree spreading and productive.

RED JUNE—Over medium, ripe the middle of June, a South Carolina Seedling, now well known in the South ; tree a fair grower.

STRIPED JUNE—Medium to large, tender and superior for table use, an early and abundant bearer ; tree a good grower.

YELLOW JUNE—Large, ripe from the middle to last of June, a Southern seedling of great merit, should be extensively cultivated for market ; tree vigorous and productive.

EARLY STRAWBERRY—Medium ; roundish ; striped with red, tender, sub-acid, pleasant and well relished for the table ; tree grows moderately, and bears well last of June.

SWEET BOUGH—Large, oblong, ovate, yellow, with a sweet sprightly flavor ; superior for the table, ripe first of July ; tree a fair grower and productive.

RHODES' ORANGE—Large, ripe early in July ; popular Georgia Seedling ; the tree yields successive crops for some time.

- JULIEN**—Medium, ripe middle of July; a delicious apple, worthy of a place in every orchard; tree a good grower and productive; a native of Georgia.
- GREEN HORSE**—Large, rich sub-acid; excellent for all purposes; always productive, and well adapted to our climate; tree a fine vigorous grower. The Yellow Horse is better known, but the green variety is superior.
- SUMMER PEARMAIN**—Medium to large, ripe the last of July and continues for weeks ripening; a valuable and beautiful Northern variety, well adapted to our climate, unequalled in flavor; tree a slow grower, but always productive.
- AROMATIC CAROLINA**—Medium to large, ripe in August; a Seedling produced at Pomaria; extensively disseminated, and considered an acquisition wherever grown; tree spreading in habit, and a great bearer.
- GRAVENSTEIN**—Large, ripe from 1st to 20th August; a European variety, succeeding well here, flesh tender, crispy and juicy; tree very vigorous and productive.
- TAUNTON**—Very large, ripe early in September, continuing for weeks, a seedling from lower Georgia, one of the best of its season; good quality and showy, should be extensively grown for market; tree vigorous and productive.
- ROBINSON'S SUPERB**—(Farrar's Summer.)—Very large, ripe from 20th September to 20th October, flesh crisp, rich and juicy; tree a fine upright grower and productive.
- HAMILTON**—Large, ripe in September, a Seedling from Cass County, Georgia; tree a fine grower and very productive.
- AUGUSTINE**—Large, red, flesh exceedingly rich and pleasant, ripe early in October; a S. C. Seedling of great promise; tree vigorous and productive.
- BUNCOMBE**—(Meigs & Rid fall pippen.)—Medium to large, beautiful red color, ripe early in October, and will keep till January; a truly beautiful and valuable apple; tree vigorous and very productive.
- ENGLISH RED STREAK**—Large, streaked with red, ripe in September, and continues for six weeks in ripening; a valuable apple for all purposes, and indispensable in every good collection; tree remarkably vigorous, and an immense bearer.
- BYAR'S RED**—Large, excellent and productive; a seedling from North Carolina, ripe in October; tree vigorous and productive.
- BUCKINGHAM**—Very large, ripe in September and October, excellent for table and cooking; good flavor and beautiful appearance; tree vigorous and a great bearer.

- MANGUM**—(Carter of Alabama—Gully & Macksfield of S. C.)
Ripe in October, and in fine eating until December, flesh tender, crisp, juicy and delicious ; tree a good grower and a steady annual bearer.
- PERKINS**—Large, red, flesh juicy and excellent ; a seedling from Georgia, and worthy of extensive cultivation, ripe in November, and will keep until January ; tree vigorous and productive.
- OCONEE GREENING**—Medium to large, ripe in October ; keeps until February, one of the best of this excellent class ; a seedling from Oconee, Georgia, flesh crisp and of a rich aromatic flavor ; tree vigorous and a great bearer.
- SOUTHERN GREENING**—(Green Crank of Georgia and Tennessee—Green skin of North Carolina.) One of the best of the tender apples ; ripe 1st November, and will keep till February ; flesh crisp, juicy, rich, vinous, honeyed flavor ; tree spreading, producing abundant crops every other year.
- POMARIA GREENING** — Large, flesh juicy, with a rich sprightly flavor, retaining its flavor, ripe in November, and will keep till March ; a seedling produced at Pomaria, S. C., and one of the best of this popular variety ; tree vigorous and productive.
- HAMMOND**—Medium to large, color green ; flesh juicy and equal to the best Newton Pippin ; ripe in November, keeps in great perfection till March ; a seedling of Spartanburg, S. C., and worthy of extensive cultivation ; tree vigorous and very productive.
- BRADFORD'S BEST**—Large, ripe in November, keeps until March ; of excellent flavor and handsome form ; tree vigorous and a constant yearly bearer.
- FERDINAND**—Fruit large, pale greenish yellow, flesh tender and best flavor ; ripe in November and keeps till March ; tree vigorous and upright, a regular bearer ; a seedling of Pomaria, S. C. ; and worthy of extensive cultivation.
- FOUST**—Medium, round, bright yellow ; flesh yellow, sub-acid ; November to March, continues fresh to the last ; tree vigorous, upright and productive.
- STEVENSON'S WINTER**—Large, November to March ; a seedling from Holly Springs Mississippi ; beautiful red color, a valuable variety ; tree moderate in growth, but a good bearer.
- YELLOW CRAB** — Medium, ripe in November, keeps till March ; a Southern Seedling, worthy of extensive propagation ; tree vigorous and a yearly bearer.

- DAVIS'—Above Medium, green, rather sweet, but retains its flavor and keeps till March; a seedling from Miss.; tree upright, vigorous and a good bearer.
- LORICK'S CLUSTER—(Smith's Cluster.) Small, yellow, ripe November and keeps till April; tree vigorous, until it commences bearing; uncommonly productive, producing its fruit in strings or clusters; worthy of extensive cultivation.
- EPTING'S RED WINTER—Large, beautiful red, resembling Red June; flesh yellow, with a rich pine apple flavor; ripe in October, and keeps well until Christmas.
- EPTING'S PREMIUM—Large, greenish, with red stripes; flesh juicy and excellent, retaining its flavor well; ripe in November and keeps till March; this variety received a premium of \$10 from the So. Ca. State Agricultural Society, as the best late seedling, a seedling produced at Pomaria, S. C.; tree vigorous and productive.
- RAWL'S JANET—Medium to large, ripe in October, will keep until January, blooms late; fruit of good flavor; tree vigorous and a regular bearer.
- LIMBER TWIG—(Neverfail of Tennessee.) Medium, ripe in November, keeps till March; a Southern seedling worthy of general culture, flesh very firm, valuable as a keeper; there are several varieties of this apple, as yellow, green, but all having the same qualities and flavor.
- LEVER—Medium, ripe in November, keeps until April; a seedling produced near Pomaria, S. C.; a handsome red apple of best quality; tree remarkably vigorous and capital bearer.
- HUGHS' CRAB—Small, ripe in November, and will hang upon the trees until Christmas, keeps till March; excellent for producing cider of superior quality; tree vigorous and an enormous bearer.
- YATES—Small, ripe in November, keeps until April; a seedling from Georgia, of pleasant aromatic flavor; tree a fine grower and a great bearer.
- NICKAJACK—Large, ripe in November, keeps till March; a Southern seedling of great reputation; it is known as Summerour, Berry, Wall, Gowdie; tree vigorous, and a regular bearer.
- SHOCKLY—Medium, ripe in November and keeps till May; a seedling of Georgia, the best late keeper, particularly adapted to the cotton belt; this variety makes a collection which will keep until the Early May ripens; tree vigorous and bearing heavy yearly crops.
- HOOVER—Large, flesh juicy and sprightly, ripe in November

- and keeping well until April, a seedling from Edisto, S. C. ; the true variety is of a beautiful red, rather oblong, and tapering to the eye ; the variety which has been extensively disseminated under this name, is the Baltimore Red, North Carolina ; tree vigorous and healthy, and a good bearer.
- COOK'S RED WINTER**—Medium to large, quality best ; ripe in October and in keeping until March, retaining its flavor well, a seedling of Newberry District, superior to the Limber Twig ; tree vigorous and a regular bearer.
- ALLEN PIPPIN**—Large, oblong, greenish yellow, with pale red streaks, of good flavor ; ripe October, and keeps till February ; tree vigorous and productive.
- MAVERICK'S SWEET**—Large, ripe November and keeps well till March ; a seedling grown by the late Samuel Maverick of Pendleton, S. C., and worthy of extensive cultivation ; tree vigorous and productive.
- CAMACK'S SWEET**—Large, yellow, sweet and well flavored ; tree vigorous and productive.
- MATTA MUSKAT**—Large, ripe in November, keeps until March ; skin rusty red, with white dots, flesh tender, yellow, pleasant sub-acid, a good keeper ; a seedling from North Carolina ; tree upright, vigorous and productive.
- SUSANNAH**—Large, oblong, oval, greenish yellow ; flesh yellow, tender, crisp, with a rich aromatic flavor ; ripens from January to April. Premium apple of the State Agricultural Society, 1859. Produced at Pomaria ; tree vigorous and productive.

PEACHES.

Select List of Peaches tested and found adapted to the Latitude of South Carolina.

EARLY TILLOTSON—Ripe June 18th to 30th, medium, free-stone, flesh white; popular for early market and table use; handsome and productive, succeeds well at the South, mildews at the North.

FAY'S EARLY ANN—Ripe 20th June, skin white with a blush next the sun, flesh white to the stone; sweet, juicy and delicious.

PEARCE'S SEEDLING—Ripe 20th June, or a few days before Early York; medium to large, with a fine blush; flesh white, and of best flavor; promises to be one of the very best early market varieties.

EARLY YORK—Ripe 20th to 25th June, medium; a delicious peach; but like the Tillotson, rather too delicate for market.

COLE'S EARLY—Ripe 22d to 25th June, medium; free-stone, flesh white, excellent, handsome.

TROTH'S EARLY RED—Ripe July 1st to 6th, medium; flesh white and firm, well suited for market.

SUMMER'S EARLY—Ripe 1st to 4th July, medium to large; flesh white and firm, skin a beautiful blush; the handsomest early market peach; bears transportation well.

EARLY ADMIRABLE—Ripe July 1st to 10th, large; flesh white; one of the best of its season; firm, and of good quality.

AMELIA—(Orangeburg June, Stroman's Early.) Ripe 6th to 12th, large; flesh juicy, and of the highest flavor, color fine red, showy, and a fine market peach; can be picked for market several days before fully ripe.

SUMMER'S LARGE RARERIPPE—(Summer's Extra Early, to distinguish it from Summer's Early.) Ripe 6th to 12th July, large, flesh white and delicious, the best peach of its season; produced at Pomaria from seed of Summer's Early.

- ELIZA—Ripe July 6th to 10th, large, flesh yellow, of best flavor ; productive and desirable.
- HONEST JOHN—(Walter's Early, Large Early York.) Ripe 6th to 10th July, large, with a fine blush or deep red cheek ; flesh very juicy, rich, excellent flavor.
- GEORGE IV.—Ripe July 8th to 18th, large, flesh white ; considered the best flavored of all peaches.
- GROSSE MIGNONE—Ripe July 10th to 15th, large ; flesh white, and like the preceding, considered one of the very best.
- EARLY NEWINGTON—Ripe July 15th to 25th, medium to large, flesh white ; a truly delicious peach, worthy of general cultivation.
- CRAWFORD'S EARLY—Ripe July 10th to 25th, very large, flesh yellow, delicious ; popular and excellent for market.
- CHINESE CLING—Ripe July 12th to 25th, very large, flesh white and juicy and well flavored ; a new variety introduced from China, and first fruited and disseminated by the late Henry Lyons of Columbia, S. C. ; worthy of a place in any collection.
- GEORGIA CLING—Ripe July 18th to 25th, medium to large, flesh white ; a Georgia seedling of great merit ; one of the earliest and best clings.
- VANDZANT'S SUPERB—Ripe July 20th to 30th, medium to large, flesh white ; a beautiful peach of fine flavor.
- CROCKET—Ripe July 20th to 30th, large, flesh white to the stone ; superior for the table and preserving.
- HOOPE'S WHITE PRIZE—Ripe July 22d to 30th, large, flesh white to the stone, and of unequalled flavor.
- STILLWELL'S WHITE—Ripe 28th July, large, white like the preceding ; unequalled in flavor, and beautiful for dessert.
- LEMON CLING—(Kenedy's Carolina.) July 18th to 25th, flesh yellow ; a beautiful lemon shaped variety ; excellent for market and preserving ; a general favorite every where. There are numerous seedlings from this variety scattered over the Southern States.
- BUVOORT'S MORRIS—Ripe 25th July, large, flesh white, and of the highest flavor ; one of the best.
- OLD MIXON CLING—August 1st to 12th, large, flesh white ; delicious, rich and excellent.
- SUSQUEHANNA—Ripe August 6th to 12th, very large, flesh yellow ; a seedling from Pennsylvania, showy, and a capital market variety.
- FLEWILLEN CLING—Ripe August 5th to 15th, medium, flesh red ; a handsome new seedling from Georgia.

CRAWFORD'S LATE—Ripe 10th to 15th August, large, flesh yellow ; a superb and valuable peach.

BUCKNER'S RED—Ripe August 1st to 20th, very large, semi-clingstone, flesh yellow ; a seedling of great merit from Georgia ; bears carriage well.

CAMAK'S NEWINGTON—Ripe August 6th to 20th, medium, flesh white ; one of the best of the August Clings ; productive.

OLD MIXON FREE—Ripe August 10th to 20th, flesh white and of excellent flavor ; very large, and always fair.

DELAWARE—Ripe 12th to 20th August, large, white and excellent for the dessert ; one of the best.

MARY'S CHOICE—Ripe 10th to 15th August, large and fair ; flesh of the best quality ; originated with the Friends of West Chester, Pa.

STUMP THE WORLD—Ripe 15th to 20th August, very large, flesh white and delicious ; valuable for table and market.

PACE OR TINSLEY—Ripe August 12th to 15th, very large ; flesh yellow, marked with red ; a well known Southern seedling, by many persons highly prized.

POINSETT CLING—Ripe August 10th to 20th, large, round, rich, yellow, with a ruddy cheek ; flesh fine and of best flavor ; a seedling of Pomaria.

COUNT'S CLING—Ripe August 10th to 20th, large, skin white, with a red cheek ; flesh white, rich and juicy ; a superior seedling produced by H. H. Counts, Esq., of Lylesford, S. C.

TIPPECANOE CLING—Ripe 20th August, large to very large, juicy and excellent flavor ; one of the largest and best.

PAVIE POMPONE—Ripe 15th to 20th August, very large ; flesh rather coarse, but when well grown and fully ripe, excellent.

TINSLEY'S SUPERB—A seedling of the Pace ; ripe a few days later, flesh a bright orange ; an excellent variety.

DRUID HILL—Ripe August 10th to 20th, large, flesh white, and of good flavor.

BROWN'S FREE—Ripe August 10th to 20th, large, flesh white ; a showy and valuable market variety.

HEATH CLING—Ripe 20th August, large, flesh firm and white ; valuable for preserving, and by many relished as very superior.

WHITE ENGLISH—Ripe with the Heath, and a seedling from the same, to which it bears a great resemblance ; seedlings of this variety abound in the South.

- ABBOT'S LATE—Ripe August 20th to 30th, large, flesh pink ; fine and fine flavored.
- WARD'S LATE—Ripe August 20th to 30th, medium to large ; flesh white ; excellent in some localities, but often poor south of Columbia.
- CLARK'S SEPTEMBER—Ripe September 4th to 10th, large ; cling-stone, flesh white ; a beautiful seedling from De Kalb County, Georgia.
- LAGRANGE—Ripe September 5th to 20th, medium to large ; freestone, flesh white ; excellent.
- SEPTEMBER FREE—Large, flesh white and of best flavor ; a seedling of Pomaria ; continues through September, and often to near the close of October.
- GLENNORE—Ripe 15th to 30th September, large, beautiful and showy, sweet and fine flavored, the best clingstone of its season ; a seedling produced by Dr. George W. Glenn, of Newberry.
- EPTING'S CLING—Ripe a few days after Glennore, medium to large ; flesh sweet and well flavored ; a seedling produced near Pomaria, and a valuable acquisition.
- ELIZA THOMAS—Ripe 25th September to 5th October, very large ; cling-stone, flesh white ; a seedling of Atlanta, Georgia, of great promise.
- CHAPLIN'S LATE GREEN—Ripe 10th October, continuing until frost, very large ; flesh juicy and fine flavored ; considered equal to any cling in mid-summer ; a seedling produced by Mr. George Chaplin, Newberry.
- CHAPLIN'S LATE RED—Ripe a week later than the preceding, large cling ; a seedling also produced by Mr. Chaplin, of the best flavor.
- ATWOOD'S LATE—Ripe 15th October, large, cling, quality excellent and of delicious flavor ; a seedling produced by Rocius Atwood, of Newberry.
- NIX LATE—Ripe October 1st to 15th, large, cling-stone, flesh white ; a productive Georgia seedling of great promise.
- CALOWAY CLING—Ripe October 10th to 20th, medium, flesh white ; of good flavor and fine appearance.
- BALDWIN'S LATE—Ripe October 25th to November 10th, medium to large, flesh white ; a most desirable late variety, and a seedling of Alabama.
- SCOTT'S OCTOBER—Ripe 25th October to November 10th, medium to large, cling-stone ; pale, dingy lemon color, with yellow fine flesh and fine flavor. A seedling produced in the garden of Jacob C. Lyons, Columbia, and disseminated by

Edwin J. Scott, Esq. ; should be in every collection in the South.

COWAN'S LATE—Ripe October 20th to November 10th ; a seedling of Lower Georgia, flesh white, and one of the best late clings ; will keep until December.

OCTOBER FREE—Ripe 20th October, large, flesh white and excellent ; fine for deserts, and a most productive variety.

UNION NONPARIEL—(Gregory's Late.) Large, cling, flavor best, equal to the best mid-summer clings, ripe 10th October ; a seedling from Union, S. C., and disseminated by Col. R. J. Gage and Col. David Johnson ; a superior variety.

EATON'S GOLDEN CLING—Ripe October 10th, large, round, deep orange, flesh firm and of unsurpassed flavor ; a seedling of Greenville, N. C. The State Society awarded a premium of \$10 to Wm. A. Eaton, Esq., for this superb variety.

DESCRIPTIVE LIST OF PEACHES.

25 CENTS EACH, AND \$20 PER 100.—EXTRA SIZED, STANDARDS AND DWARFS, 50 CENTS.

P E A R S .

Select List of Pears fruited at Pomaria, and recommended as worthy of Cultivation.

- MADELINE—Two varieties—green and striped; medium; flesh white; juicy, melting, when fully ripe; last of May.
- JARGONELLE—Fruit rather large, long, pyriform; juicy, pleasant flavor; June.
- UPPER CRUST—Fruit dull russett; medium, melting and delicious; ripe 15th to 20th June; a seedling grown at Pomaria, S. C.
- JULIENNE—A handsome and early productive pear, of melting delicious flavor; ripe 15th to 20th June.
- DEARBON'S SEEDLING—Small, yellow, flesh white, juicy, an early and abundant bearer; ripe 4th July.
- BLOODGOOD—Medium, yellow russet; melting, buttery, with a sweet rich, aromatic flavor; 10th July.
- ST. ANDREWS—Medium, flesh melting and sugary, exquisite flavor; ripe 4th to 6th July.
- SUMMER BONCRETEIN—Large, flesh tender, sugary, extremely buttery; a constant and early bearer; ripe 4th to 10th July.
- STEVENS' GENESSEE—Above medium, yellow, beautiful; flesh white and buttery, and best quality; ripe 15th to 20th July.
- OSBAND'S SUMMER—Medium, half melting, excellent; ripe 15th July.
- MOORE'S—Large, yellow, uniformly beautiful, tender and best flavor; ripe 20th July; may prove synonymous with Philadelphia.
- ROSTEZIER—Medium, yellowish green, melting, very juicy; rich, sweet aromatic flavor; ripe 15th to 30th July.

- DOYENNE DE ETE—Small, melting, beautiful pear ; 12th July.
- OTT—Small, yellow, delicious, high flavored ; 12th to 20th July.
- SUMMER FRANC REAL—Medium, rich and melting ; a great bearer, and a beautiful pyramid ; ripe 15th to 20th July.
- TYSON—Above medium, melting, juicy, sweet, fine flavored ; tree vigorous and productive ; ripe 20th July.
- BARTLETT—Fruit large and fair ; smooth clear yellow, with a blush ; flesh white, fine grained and exceedingly buttery ; ripe 1st to 10th August.
- SECKEL—Medium, green, with a dark red cheek ; flesh sweet, juicy sweet, and considered the perfection of pear flavor ; ripe 10th to 20th August.
- BLEEKER'S MEADON—Medium, round, half melting, flesh juicy and good ; tree very productive ; ripe 10th August.
- BUFUM—Medium, buttery, sweet and fine flavored ; tree upright, and a heavy bearer ; ripe 20th August to 10th September.
- WHITE DOYENNE—Medium to large, flesh white, buttery, and of finest flavor ; very productive ; ripe 10th August.
- DOYENNE GRAY—Similar in quality to the preceding, fruit of a reddish variety ; tree productive, and an early bearer.
- FLEMISH BEAUTY—A large, beautiful, melting, rich pear ; tree vigorous and fruitful ; ripe 15th August.
- FULTON—Medium, round and russety, melting, rich and excellent ; tree vigorous and productive ; ripe 10th to 20th August.
- FORELLE, OR TROUT PEAR—Medium, fine speckled, buttery, melting and rich, bears early and abundantly ; ripe 10th to 15th August.
- HENRY IV —Medium to large, round, greenish, a good bearer, and with us decidedly first rate ; ripe 20th August.
- HACONS INCOMPARABLE—Large, round, melting, and rich ; tree spreading, and very productive ; ripe August 5th to 15th.
- PARADISE DE AUTOME—A large, fine, melting Pear, of first quality ; ripe 20th August to 1st September.
- DR. BACHMAN—New seedling pear, produced at Pomaria, and named in compliment to our friend Rev. John Bachman ; a premium awarded by the South Carolina State Agricultural Society ; size medium, round, green, with a dull red cheek ; flesh juicy, vinous and refreshing ; ripe 15th to 20th August.

- PETRE—Obovate, pale yellow, buttery, melting and rich; ripe 20th to 30th August.
- PRATT—Medium size, melting, buttery, rich and good; 1st September.
- BELLE LUCRATIVE, (Fondante de Autume)—Medium size; melting and delicious; bears early and abundantly; September.
- DUCHESS D' ANGOULEME—Very large, flesh white, melting and delicious; tree an early and abundant bearer on the quince; September 10th. A variegated variety similar to the above fruit; not quite so large, but of best flavor.
- DOYENNE BOUSSOCK—Large delicious pear; ripens September; a good grower, and productive.
- DOYENNE DOWNING—New French pear of the highest excellence; flesh white, melting, and best quality; ripe September; tree vigorous and productive.
- TONGRES—A new Belgian pear of a beautiful red color, of fine large size, and best quality; ripe September; tree vigorous and productive.
- OMAR PASHÁ—A new French pear, large, evenly formed; flesh white, melting, excellent; September.
- FONDANTE CHARNEUSE—A new pear of large size, almost rivaling the Duchesse de Angouleme; flesh white, exceedingly melting and delicious; September; tree vigorous and productive.
- BELLE ET BONNE, (of Leroy)—Very large, round, flesh buttery, and melting, best quality; tree vigorous and productive; September.
- LOUISE BONNE DE JERSEY—One of the finest of all pears, large, beautiful and delicious.
- COLMAR DE LOTT—Medium, flesh white and excellent, very productive; September.
- URBANISTE—Large melting pear, productive on the quince; September.
- ST. GHESLAIN—Medium sized pear, of exquisite flavor, but ripened in the house; 20th August to 1st September.
- SWAN'S ORANGE, (Onondaga)—Very large, melting, high-flavored pear; vigorous and productive; September.
- GOLDEN BEURRE OF BILBOA—Size above medium; beautiful, flesh white and fine flavored; tree productive, August and September.
- BRANDYWINE—Medium, and of excellent quality; tree vigorous and productive; 20th August.
- SURPASSE VIRGALIEU—Medium, flesh fine grained, juicy, aromatic; ripe 20th August to 1st September.

- BEURRE GIFFARD—Medium size, melting, tree thrifty and productive; one of the best new varieties; ripe 6th to 10th July.
- BEURRE CLAIRGEAU—New French variety, quite large, of excellent quality. September.
- BEURRE DIEU—Large, buttery, rich, and fine. September.
- MARIE LOUISE—Large, melting, of first quality; the tree is a poor grower, and should be grafted only on the pear.
- GRASLIN—Large, flesh coarse, buttery, juicy, and melting, with a rich, vinous flavor; promises well. September.
- HENRIE BIVORT—Large and beautiful, flesh yellow, melting, sweet, and deliciously perfumed; ripe August; tree productive.
- BEURRE ST. NICHOLAS, (Duchesse d'Orleans)—Fruit large, obovate, pyriform, juicy, aromatic flavor; ripens September, and keeps for some time; a pear of great promise.
- PIUS IX—Fruit large, yellow, flesh rather coarse; rich and good. August.
- PHILIP GOES—Medium, flesh fine and melting, sweet and perfumed.
- PHILADELPHIA—Fruit large, flesh rather coarse, melting, sugary, and perfumed. September.
- NOVEAU POITEAU—Fruit large, melting, sugary, vinous, and refreshing; a pear of great promise.
- EASTER BEURRE—Large, melting, ripe November, keeps till January; worthy of a place in every collection.
- BEURRE GRIS DE HIVER—A large, melting, butter pear; ripe November.
- DOYENNE DE HIVER, OR ALENCON—A large late keeping variety, one of the best.
- GLOUT MORCEAU—A large, melting, buttery, sweet pear; tree vigorous and productive.
- JOSEPHINE DE MALINES—A fine Flemish winter pear; medium, rich and melting.
- LAWRENCE—Large, melting, rich flavored; tree a good grower; regular and abundant bearer; October to November.
- PRINCESS ST. GERMAINS—Medium to large, juicy, fine flavored; November, and continues to ripen and keep well.
- VICAR OF WINKFIED, OR MONSIEUR LE CURE—Large, long, good, when perfectly ripe; superior for baking, a great bearer; November, keeps long.
- WINTER NELIS—One of the best early winter pears, medium, rich, melting, and exquisite flavor; October, and keeps a month or six weeks.

JAMINETTE—Medium, of a rich almond flavor; one of the best of the late varieties.

COLUMBIA—A large, melting, rich pear; tree vigorous and productive.

BEURRE LANGLIER—Large, greenish, melting, juicy and vinous; a pear of great promise for the South.

LIEUTENANT POTOVIN—Large, yellow, flesh juicy; November, and promises to be a valuable late keeper.

MADAME MILLET—Medium to large, flesh white, sugary, and agreeably perfumed; November.

VINCENT ST. PAUL—Fruit small, russet, ripening late; keeps well.

MARTIN SEE—Fruit small, but a most abundant bearer; late ripening, and keeps well—improving in flavor.

UVEDALES ST. GERMAINS—(Angora and Belle Angevine.) A large, late baking pear, often weighing two pounds, productive; ripens November, and keeps till March.

WINTER BON CRETEIN—Large, ripening in November; a good keeper, and one of the best winter pears.

LEWIS—Fruit small to medium; pale green, with russetty specks; flesh melting and rich flavored; ripe October, and keeps some weeks.

-

Spanish Marron Chesnuts. 50 Cents.

- MARRON DE CRAON | MARRON GOLDEN OF LYON.
 MARRON DU LIMORESIN.

The Spanish Marrons are well adapted to our climate, fruit very large, sweet and palatable, and are very productive in good soils—a tree at Pomaria bearing abundantly.

DESCRIPTIVE LIST OF HARDY NATIVE GRAPES.

- LENOIR — (Devareaux, and Thurmond of Georgia,) origin Sumter District, S. C. Bunches large and compact, sometimes shouldered ; berries small, black, sweet and palatable, without pulp ; ripens early, about 25th July ; excellent for table and wine.
 RED LENOIR, OR PAULINE—Bunches large, crowded and compact, skin pale amber, sweet, delicious, excellent for table and good for wine ; enormously productive, ten days or two weeks later than Herbermont ; a valuable variety.

DELAWARE—Bunches small, compact and generally shouldered, berries small, skin thin, of a beautiful flesh color, free from pulp, sweet, vinous and aromatic ; ripens with Lenoir, and promises to be a valuable and productive variety.

DIANA—A seedling of the Catawba, of best quality ; bunches regular and large, berries round, reddish lilac, thickly covered with bloom ; flavor rich, vinous and aromatic, productive and vigorous.

TO-KALON—Bunches large, berries large, of a dark amber color, inclining to black, very delicate and tender ; perfectly sweet and luscious, with an agreeable aroma ; promises to be a valuable variety for the South.

ISABELLA—Bunches large, berries oval, black, sweet, and when fully ripe, excellent, a great bearer, but ripens irregularly, unless the season is dry. Saluda, an accidental variety of this grape, promises to be worthy of cultivation.

CATAWBA—Bunches medium in size, shouldered, berries large, pale red, deeper in the sun, with a thin lilac bloom. This is the great wine grape. There are many varieties of this grape, the best of which is Hardy, a seedling of Ashville, N. C.

ELSINBORO—A nice little desert grape, perfectly sweet and melting, without pulp ; of a chocolate color.

GARRIGUES—A seedling of Isabella, bunches large, loose, shouldered ; berries large, oval, deep purple, well flavored, juicy, sweet ; ripe a few days before Isabella.

LOUISA—Bunches medium, rather compact, sometimes shouldered ; berries round, inclining to oval ; black, with blue bloom, somewhat the flavor of Isabella, but of better quality and ripening a few days earlier.

REBECCA—Bunches beautifully formed, compact, and sometimes shouldered ; berries of medium size, oval, color light green in shade, auburn or golden when exposed to the sun, with a bloom ; flesh somewhat pulpy, juicy, sweet, and delicious, with an agreeable flavor.

ANNA—Bunches similar in form to Catawba, except in color, which is greenish, or pearly white, sometimes amber ; flavor rich, and peculiar, sugary, vinous, and spicy, resembling the Muscat of Alexandria. We pronounce this seedling of Dr. Grant's one of the most valuable acquisitions that has been added to our native grapes.

UNION VILLAGE—(Shaker.) Fine grower ; dark color ; bunches very large.

CHILDS SUPERB—Bunches large, berries amber colored, very large, flesh clear, crispy, watery, form fine, pulp rich and de-

- licious, promises to be an excellent variety, flesh slightly pulpy, sweet, juicy, rich, aromatic and slightly musky.
- BLANDS, OR ROSE GRAPE**--Fine table grape when well grown; requires deep soil abounding in potash, bunches loose, berries large, and of a beautiful pale rose amber color; skin thin, slightly pulpy, pleasant and well flavored.
- HERBERMONT MADEIRA**---(Warren of Georgia.) An excellent wine, and most delicious table grape; bunches large, long and shouldered; berries of medium size, free from pulp, extremely juicy and refreshing.
- CLINTON**--Hardy, vigorous grower, and great bearer, bunches shouldered, berries black, covered with a thick bloom; juicy, with considerable acidity, and vinous flavor; excellent when fully ripe, and relished by most tastes.
- CONCORD**---Fine promising grape for the South; bunches compact, large, shouldered, berries large, globular, almost black; thickly covered with bloom; flesh moderately juicy, buttery, very sweet. It promises to be a good wine and table grape.
- SEPTEMBER BLACK**---Bunches compact, berries black, with the peculiar flavor of the small winter grape; not fit to eat until fully ripe, when it is pleasant and agreeable; ripens latest of all grapes, and valuable for its late keeping.
- CLARA AND EMILY**---Two seedling grapes produced by Peter Rabe, near Philadelphia; have not been tested as to hardiness; their leaves and growth indicate that they are seedlings of foreign grapes, which may prove valuable for the South; flesh juicy, with little or no pulp; best quality.
- SCUPPERNONG**---Bunches small, loose, composed of from four to six; round, large, flesh pulpy, when thoroughly ripe, juicy and sweet, with a peculiar aroma, they drop from the vine when fully ripe. The Black Scuppernong is similar in flavor. There are several varieties which have been brought into notice; all are valuable for making wine of a peculiar aroma. Thomas, a variety produced in this State, is one of the most promising.

DESCRIPTIVE LIST OF STRAWBERRIES.

- ALBANY, OR WILSON'S SEEDLING**---Fruit large, broadly conical; deep crimson, flesh of a bright ruby color and best flavor, the most productive, early and desirable variety we have grown; continues long in bearing; flowers perfect and the best fertilizer that can be planted.

- BURR'S MAMMOTH**, or Burr's Seedling—Vines vigorous and hardy; fruit large, light pale red, mild pleasant flavor, but too tender for transportation.
- LONGWORTH'S PROLIFIC**—Flowers perfect, fruit large, often very large; regular, roundish, rich, light crimson, with a delightful high brisk flavor.
- McAVOY'S SUPERIOR**—Flowers pistilate, fruit very large; deep glossy crimson, deep scarlet, very juicy, with an exquisitely rich vinous flavor; an indispensable variety in every garden.
- McAVOY'S EXTRA RED**—Fruit very large, but too acid for most palates; excellent for tarts and jellies, and a good substitute for the cranberry.
- BOSTON PINE**—Requires deep rich earth and a good space, to bring it to perfection, fruit large, deep rich sherry red on the exposed surface, with a sprightly agreeable flavor; staminate and productive.
- HOVEY SEEDLING**—Fruit large, deep shining scarlet, flesh firm, fine flavored, flowers pistilate, and with a good fertilizer this variety produces immense crops; bears carriage well.
- MOYAMENSING**—Large, deep crimson, with a pleasant and excellent flavor; ripens gradually; very productive with a good staminate.
- HOOVER**—Large, conical, regular, deep crimson, almost maroon; of a rich fine flavor, flowers perfect and an excellent productive variety; promises to be one of the best varieties.
- CRIMSON CONE**—Fruit medium to large, regular elongated conic; flesh firm, sprightly, rich acid flavor; a good market variety, and excellent for preserving.
- WALKER'S SEEDLING**—A most productive late variety, fruit large, deep crimson, juicy, with a fine fresh rich flavor.
- SCARLET MAGNATE**—Berries large, rich fine flavored, very productive, and promising to be one of the best.
- PRIMORDEAU**—Fruit large, tender, rich flavored, productive, a fine variety for the amateur.
- BURR'S NEW PINE**—This fine variety is only suited for the amateur, the vines subject to die out; flesh tender, sweet and palatable without sugar.
- JENNY'S SEEDLING**—A good hardy, vigorous and productive variety for market and preserving, fruit medium to large, conical, color dark red; firm, sub-acid and agreeable.
- EARLY SCARLET**—Sent without charge as a fertilizer.

Many new varieties on trial, will be tested, and if found worthy, inserted in the next annual Catalogue.

ORNAMENTAL DEPARTMENT.

DECIDUOUS TREES.

The height given is an approximation to what it is supposed the Trees will attain in this country, in order to serve as a guide in planting out.

- TAMARIX GERMANICA**—German Tamarix. \$1 00.
- “ **GALLICA**—French Tamarix. \$1 00.
- “ **AFRICANAS**—African Tamarix. \$1 00.
- “ **INDICA**—Eastern; new and beautiful. \$1 50.
- ULMUS**—Elm. These are very graceful; well adapted as shade trees near buildings; beautiful ornaments for church yards: they grow well in any deep, rich soil; 50 to 75 feet.
- ULMUS LATIFOLIA**—Broad leaved European Elm; beautiful and rapid grower. \$1 50.
- ULMUS CAMPESTRIS** European Elm; fine for streets, lawns, and shade; compact foliage. \$1 00.
- ULMUS PYRAMIDALIS**—Pyramidal Elm; fine pyramidal form. \$1 50.
- ULMUS PENDULA**—Long, drooping branches, graceful, and very ornamental. \$1 50.
- VIRGELIA LUTEA**—Yellow wood; a beautiful growing tree, with numerous whitish pea-like flowers; worthy of a place in every landscape; 30 feet. \$1 50.

DECIDUOUS SHRUBS.

- AMORPHA**—Bastard Indigo; very beautiful, and vigorous growing shrubs in dry and stoney soils, with large red and bluish flowers in spring.
- AMORPHIA CROCEA**—Linear leaved, new and beautiful; 50 cents.

- AMORPHA FRUTICENS—Graceful. 50 cents.
 “ GLABRA—Glabrous, one of the best. 75 cents.
 “ LEWISSI—Lewis amorpha; new and beautiful;
 75 cents.
 AZALEAS—American Azaleas. The flowers are considered
 among the finest in spring; all are perfectly hardy, and grow
 best in moist and shaded places. These flowers are of almost
 every color. \$1 00.
 AZALEA PONTICA—Color yellow, shaded white and pink.
 “ ALBA FLORA—White flowering.
 “ “ “ PLENO.—Double white flowering,
 beautiful.
 AZALEA GLAUCA—Red flowering, glaucous leaved.
 “ GRANDIFLORA.—Large, white shaded roses, sup-
 erb.
 AZALEA BICOLOR—Red and violet flowering. \$1 00.
 “ COCINEA—Crimson flowering beautiful. \$1 00
 “ “ GRANDIFLORA—Crimson, large, flower-
 ing, superb. \$1 00.
 AZYLEA CUPECUM—Copper colored. \$1 00.
 “ ELEGANS—Graceful pink flowering \$1 00.
 “ INDICA ALBA—Indian, white flowering, fine. \$1
 “ MUNDIFLORA—Bright rose colored, fine. \$1 00.
 “ PURPURESCCUS—Purple flowering. \$1 00.
 “ TRICOLOR—Red, pink, and purpleish flowered. \$1
 “ VITATURA—Strained bright flowering. \$1 00.
 BERBERIS—Barberry; all beautiful low shrubs; admired for
 their foliage, flowers, and fruit; they grow well in any soil.
 BERBERIS ATROPURPUREA —Purple leaved, succeeds
 finely. 50 cents.
 BERBERIS FORTUNIS—Fortunes pink, flowering beauti-
 ful. \$1 00.
 BEBBERIS VIOLACEA—Purple leaved. 50 cents.
 “ DULCIS—Sweet barbary, fine fruit. 50 cents.
 “ FRUITA ALBA—White, fruited, excellent 50
 cents.
 BERBERIS WALLACIANA—Wallachian, new, purple, fruited
 \$1 00.
 BERBERIS SINENSES—Chinese barbary, new, and fine. \$1
 BUDLEA GLOBOSA—Large leaved, orange, flowers globu-
 lar; form very beautiful. 50 cents.
 BUDLEA LYNDLIANN—Showy, dark purple spikes, flow-
 ering abundantly the entire season. 50 cents.

CRATEGUS SPLENDENS—Hawthorn; a beautiful shrub. 50c.

VIRGINICA—Large, white, good, they grow well in any soil.

DEUTZIA—A genus of very popular shrubs, which bloom early in summer. The flowers are white and most abundant, highly esteemed for making bouquets

DEUTZIA CRENATA—Crenated leaved, beautiful.

“ GRACILIS—Graceful, very fine, profuse bloom.

“ SCABRA—Rough leaved, profuse bloom. 50c.

“ STAMINEN—Stiff, upright, harlet, strong grower.

DIOCLEA GLYCINOIDES—A new and beautiful trailing vine, with bright red flowers, resembling Fuschias, fine for covering beds.

FORSYTHA VIRIDISSIMA—Golden Bell, blooms in Feb. and March, with numerous yellow bell-shaped flowers, beautiful for ornamental hedges. 50c.

HYDRANGEA JAPONICA—Japan, beautiful. \$1 00.

“ MERIA CORDALA—White heart fine leaved

“ NOVO SPECIES—A new beautiful and distinct kind. \$1 00.

HYDRANGEA QUERCIFOLIA—Oak leaved, white, superb. \$1 00

HYPERICUM JOHNSWORT—Dwarf shrubs, producing a profusion of yellow flowers throughout the season.

HYPERICUM ELATUM—A large calyxed, beautiful. 50c.

“ AMOENUM—Pretty, St. John's wort. 50c.

COTONEASTER—The beautiful small white flowers and numerous red berries, make these shrubs a general favorite. They grow in dry soil.

COTONEASTER FRIGIDA—Stiff, showy and distinct. \$1 00.

“ ROYLEANA—Royles, new, beautiful. \$1.

“ TOMENTOSA—New and graceful. \$1 00.

CELTRA PANICULATA—Very remarkable for its bunches of white flowers. 50c.

CORONILLA EMERUS, SCORPEON SENNA—Low shrub with immense pale, yellow, pea-like flowers, very beautiful. 50c.

CORIARA RUBICAULS—Esteemed for its bushy and glossy foliage, and numerous pink flowers. 50c.

- CYDONIA—Japan Flowering Quince. Shrubs of the most ornamental class for their early blooming ; beautiful for ornamental hedges. 50c.
- CYDONIA JAPONICA—Red, crimson flowering, beautiful.
- “ ALBA—White flowering, beautiful.
- “ SINENSIS—Pink flowering, beautiful. 50.
- CYTISUS—Laburnums. These are very fine shrubs, bearing abundant yellow flowers in regular succession during the whole summer. They are well adapted for covering dry and rocky spots, and will thrive well in almost any soil ; perfectly hardy.
- CYTISUS CAPILUS—Large, dark yellow, flowers in round heads. 50c.
- CYTISUS LABURNUM—Large, bright yellow flowers, in levy bunches. 50c.
- SYRINGA—
- WEGELIA—Beautiful ornamental shrubs, with rich foliage and numerous flowers.
- WEGELIA ROSEA—White, pink and rose flowers. 50c.
- “ AMABILIS—Beautiful, with rose colored flowers, blooming nearly the whole season. 50c.
- VIBURNUM OPULUS—Snowball. A strong growing shrub in immense white fleeces like the Hydrangea. 50c.

DECIDUOUS CLIMBERS.

- BIGNOMA GRANDIFLORA—Chinese Bignoma. A strong growing vine with large trumpet yellow flowers, grows rapidly, beautiful. 50c.
- CLEMATIS—Virgin bower all, beautiful, flowering various, suitable for covering trillises and arbors. 50c.
- CLEMATIS ALPINE—Large dark blue, virgins bower grafted.
- “ AZUREA GRANDIFLORA—Large, light blue Chinese.
- CLEMATIS CRISPA—Bell, virgin bower, very beautiful.
- “ FLAMULA—Sweet scented virgins bower.
- “ RUBRA—Red flowering, very handsome.
- “ VITICELLA—Travler's Joy: Dark purple, good.
- “ Virgineca—Large, white, good.
- DIOCLEA GLYCINOIDES—A new and beautiful trailing vine, with bright red flowers, resembling Fuchreas, fine for covering beds, rock work, &c. 50c.

- JASMINUM MUNDIFOLIA—Jasamine, early yellow, a well known climber. 50c.
- JASMINUM NEPALEUSIS—Large yellow Nonpariel, beautiful. 50c.
- LONICERA HONEYSUCKLES—All are fine climbers and well adapted for arbors ; known over the globe for their simple beauty and delightful fragrance. 50c.
- LONICERA JAPONICA—Japan white, yellow woodbine.
- “ FLORIBUNDA—Many flowing, beautiful.
- “ BELGICA—Belgian Honeysuckle, sweet scented monthly, very fine.
- LONICERA OCCIDENTALIS —Purple flowering woodbine ; 25c.
- LONICERA ROYLEIN—Upright, one of the best, new. 50c.
- “ CAPRIFOLIS—Yellow, monthly, fine.
- “ PERICLEUM—White, strained with rose, beautiful.
- LONICERA SINENSIS—Evergreen, flowers white, extremely fragrant. 25c.
- WISTERIA SINENSIS—Chinese Wistena, or Glycine vine. A strong growing vine with long clusters of lilac flowers ; the best vine grown for covering arbors, &c.
- WISTERIA SIRIRSS VIOLACEA—Violet flowering, beautiful. \$1 00.
- WISTEBIA FRUTESCENES—Rose colored, very pretty. \$1 00.
- PUNICA—Flowering Pomegranates. Beautiful ornamental shrubs with large double red, yellow and straw colored, and variegated flowers ; adapted to any soil. 50c.
- PUNICA RUBRA—Red, double flowering.
- “ COCINUA—Yellow double flowering.
- “ VARIEGATED—Variegated, red and white. 50c.
- SPIREA—All are beautiful dwarf shrubs, blooming from early spring till fall. They are all distinct in foliage and bloom profusely ; adapted to any soil. 50c.
- SPIREA DOUGLASSI—Douglass' pink flowering.
- “ GRANDIFLORA—Large flowering, superb.
- “ PRUNIFOLIA—Double white, extremely pretty.
- “ REEOSII—Reves, pure white, beautiful.
- “ “ FLORA PLENO —Reves' new double white, beautiful.

- SPIREA TOMENTOSA—Downy, most excellent kind. 50c.
 “ SOLIRIFOLIA—Willow, leaved fine, white flowering
 “ RAMOUN—Ramoun's large double red. \$1 00.
 “ CALLOSA—New Japan variety, with large corynals
 of pink flowers. 50c.
 SYRINGA—Lilac, esteemed for their early bloom, embracing
 every color from white to crimson. 50c.
 SYRINGA RUBRA INSIGNIS—Large, red flowering.
 “ SANGUINEA RUBRA—Dark, red flowering.
 “ VIOLAUA FLORE PLENO—Violet or blue.
 “ PRINCE NUTGER—Purple, large flowering.
 “ SINENSIS ^{DBB} CHENESE—White flowering.
 “ ROYALIS—Royal's new purple fence.

HARDY EVERGREEN TREES.

- ABIES—The Spruce Fir. All the species are very ornamental
 shade trees. They will grow best in a dry argillous soil, with-
 out being too compact or too damp, they prefer hills exposed
 to the North; hight of their growth from 60 to 80 feet.
 ABIES EXCELSIA—Norway Spruce. A majestic and lofty
 tree, admired very much for its regular conical growth. \$1
 to \$2 00.
 ABIES SEPHALONICA—Sephalaria Spruce. An elegant tree
 with gracefully drooping branches and light green foliage.
 \$2 00.
 ABIES SPERTABILLIS WEBBIANO—Webb's purple coned
 Spruce. This kind has large silberg, colored leaves with cones
 sometimes 9 inches long. \$2 50.
 ABIES NOBILIS—Noble or large bracted spruce, highly ad-
 mired by many for its growth and symmetry. \$2 00.
 ARAUCARIA—A noble genus of remarkable trees of majes-
 tic growth from the southern hemisphere. They grow freely
 in a sankyrich soil with a dry bottom; general height 30 to
 40 feet
 ARAUCARIA IMBRICATA—Chili Pine. Grows rigid, branch-
 es out in horizontal whorls, leaves dark green, of an oval
 luner shape, very distinct and beautiful. \$3 00.
 ARAUCARIA CUNINGHAMI—Luningham's Pine, a very
 symmetrical growing tree of great beauty, and rapid growth.

- HELIANTHEMUMS—Are little, dwarfish shrubs, exceedingly floriferous, and very proper for borders in an arid soil.
- HELIANTHEMUM VULGARE ALBA—White flowering.
 " " AUCANTICUM FLORA PLENO—
 Double yellow flowering, beautiful.
- HELIANTHEMUM ROSCA—Rose, double flowering, pretty.
 " " COCINEA—Crimson flowering, fine.
 " " AUROMTIACUM—Grandiflora, large, yellow flowering, new and beautiful.
- ILEX—European fancy holly, are beautiful evergreens for diversity of character and beauty of foliage; no other family surpasses it; it delights in deep, rich soil.
- ILEX AQUAEFOLIA—English water holly, fine and distinct.
- ILEX MARGINATA ALBA—White marginated leaved holly.
 " " AUREA—Yellow marginated leaved holly.
- ILEX FEROX—Feroxicously pinned leaved holly.
 " " AURERA—Feroxicously yellow pinned leaved holly.
- ILEX FEROX ARGENTA—Feroxicously white pinned leaved holly.
- ILEX FLAMMELA AURERA—Flamma, gold leaved holly
 " LONGIFOLIA—Long leaved holly, graceful.
 " LAUROFOLIS—Laurel leaved, beautiful.
 " " ARGENTEA—Silver edged laural leaved holly.
- ILEX LAUROFOLIA AURERA—Yellow edged laural leaved holly.
- ILEX LATIFOLIA JAPONICA—Japan broad leaved holly; a beautiful kind, with leaves like *magnolia grandiflora*, very pretty.
- LAURUS NOBILIS—Noble or spice laurel, a plant with dark green shining leaves, of spicy flavor, grows well in rich, shadey places.

LIGUSTRUM—Privet shrubs, with beautiful green close foliage, grow well in the sun or shade in most any soil, and will make very agreeable fancy hedges.

LIGUSTRUM JAPONICA—Japan Privet, large plant. 50c.

Small plant, per dozen, \$3 00.

Small plant, per hundred, \$15 00.

LIGUSTRUM LATIFOLIA—Broad leaved Privet, very fine.

LIGUSTRUM OVIFOLIA—Round leaved, resembles very much the fragrant Olive, beautiful.

LIGUSTRUM FOLIS AGENTHEA—Silver edged Privet, pretty.

LIGUSTRUM AUREREA—Yellow, or golden edged Privet.

LOTUS HIRSUTUS—A new and distinct bedding shrub, which grows in any soil.

MAHONIA—The Mahonias are beautiful green leaved shrubs, produces in spring handsome bunches of yellow flowers, and grow in most any soil.

MAHONIA REPENS—Has pale green foliage, good.

“ FACIALARS—With shining green foliage, and purple fruit.

MAHONIA SERATA—Scented leaved Mahonia, beautiful.

“ DIVERSIFOLIA—Various leaved, very beautiful.

“ NEPALASIS LITIFOLIA—With large green foliage, dark purple fruit; is very distinct, new.

MAHONIA ROTUNDIFOLIA—Round leaved, very pretty.

MYRTUS—Myrtle trees are beautiful little shrubs, with pretty small white flowers and highly aromatic leaves. They grow best in a damp and shady place.

MYRTUS COMMUNIS—Common Myrtle.

MYRTUS FLORA PLENO—Many flowering Myrtle, good.

MYRTUS BUXIFOLIA—Box leaved Myrtle, pretty.

MYRTUS ROMANAE—Roman broad leaved Myrtle, very distinct and beautiful.

NANDINIA DOMESTICA—Very fine shrub, with delicate red foliage, lately introduced from China; thrives well in shady places.

OLEA FRAGRANS—Fragrant Olive, the dark delicate shining foliage, and the cinnamon-tea scented little white flowers, make this shrub a great favorite among the civilized population of the whole globe; this plant only succeeds in a rich, moist, shady place.

PERNETTYNA MYCROPHILLA—Small leaved.

PERNETTYNA MUCRONATA—Mucronata leaved, new and beautiful.

PHLOMIS—Plants thrive best in a dry strong soil, they have white thick wooly leaves like Sage, and bear an immense quantity of yellow flowers.

PHLOMIS TUBEROSA—Tuberosa, whitish leaves, fine bedding plant.

PHLOMIS VIRCAS—Green leaved Phlomis, beautiful.

PHOTINIA—Evergreen Quince. Shrubs with large and distinct green shining foliage, like the Magnolia, and lovely flowers like Hawthorn, they do well in any soil,

PHOTINIA SERULATA—Serated leaved, beautiful.

PHOTINIA DENTATA—Marginated toothed leaves, pretty.

PHYLLIRCAS—Beautiful and highly ornamental shrubs, which form thick bushes; their flowers although not very showy, spreads an agreeable odour; they grow in any soil.

PHYLLIRCA AUGUSTIFOLIA—Narrow Willow leaved, fine.

“ CRISPA—Crisped leaved, beautiful.

“ LATIFOLIA—Broad leaved, one of the best

“ MEDIA—Medi leaved, very pretty.

“ OLEAFOLIS—Olive leaved, beautiful.

“ RACEMOSA—Ramous leaved, new and good.

PITTISPORUM—Sperium of shrubs with handsome foliage, small white flowers in clusters and very fragrant. They grow best in damp, rich, shady places.

PITTISPORUM TOBIRA—Green Chinese Pittisporum.

“ VARIEGATA—White edged Pittisporum, very distinct.

RAPHIOLEPIS—Beautiful little shrubs, with lovely white flowers; a rich moist soil is wanting for their growth.

RAPHIOLEPIS RUBRA—Flowers white, with red centre, beautiful.

RAPHIOLEPIS SABIFOLIA—Willow leaved, new and pretty.

THEA COHEA—Tea plant, celebrated over the world as furnishing the domestic drug called “Tea,” it only succeeds with us if planted in a damp moisty place, sheltered from the rays of the sun.

VIBURNUM TINUS—Laurustinus, a fine and bushy shrub, with small white flowers in large flattened panicles; blooms during the winter and is for this reason a greet favorite; it delights well in rich dry soil.

ROSES.

The soil best adapted for the growth of Roses is that of a strong, deep, rich loam, or vegetable mould, mixed with about one-fourth its bulk with well decomposed stable manure; to which add charcoal dust, whenever it is convenient to do so.

The best situation for them is an eastern or nothern exposure, rather than a southern, as the intense heat of our summers often affect injuriously the expansion of the flowers, their color and fragrance. Roses should be pruned every year. The hardy kinds in fall and during winter, and the more tender kinds in the spring. The principal objects in pruning are the removal of the old wood, when the young wood produces large, fine flowers, and the shortening in and cutting back the strong young shoots one-third their length, that the root, having less wood to support, may direct all its nutriment to the size and beauty of the flowers. All budded roses will require some care and attention during the first season after transplanting. All sprouts should be rubbed off the stock as soon as they appear, until the bud forms a head of its own strong enough to take up all the sap which the root supplies; after which finer roses and hardier plants will be attained, than of roses grown on their own roots.

All faded blooms should be removed from the plant, for if left to form seed vessels, much of the sap is diverted from the support of the young shoots.

DAMASK PERPETUALS.

50 CENTS EACH—\$5 00 A DOZEN, UNLESS OTHERWISE NOTED.

Blanche—Middle size, snow white, cupped, new. \$1 00.

 Banksea—Yellow, in clusters. 50 cts.
 Banksea—Fragrant, white, in clusters. 50 cts.

DALHIAS.

The soil best adapted for Dalhias, is a sandy loam, not retentive, of moisture, and not too rich, as they will grow to leaves and branches; producing few flowers, and even them imperfect; not too poor, as in such they will be very indifferent, meagre in size and general appearance. If the soil is too rich and heavy, a portion of sand should be mixed with it, but if too poor, incorporate with the sand well decomposed manure, and when the plants are planted, a stake should be put with it, to which they must be carefully tied as they grow, never allowing more than one stem to each plant.

A choice collection of premium Dalhias, of the finest and most fancy varieties, and of all colors, have been procured and flowered. These embrace the most beautiful kinds of the globe; and all the varieties are of proper form, color and size.

SINGLE PLANTS \$1 00. \$5 00 TO \$10 00 A DOZEN.

- Anibal Bliquet—Rosy lilac, large size, perfect form.
 Aurora—Rosy salmon, large petal, beautiful.
 Alfred Salter—Lilac, changeable.

 Victorine---Deep, rich purple, superb.
 Victorie de Alma---Deep scarlet, large and perfect.
 Yellow Queen---Orange yellow, spotted with rose, fine.

CRYSTANTHEMUMS.

To grow these in perfection, they require rich, light soil, and about the end of the month of March, the roots should be lifted, divided and planted into fresh soil, either by giving them a new situation, or changing the earth they were in. Two or three stems together are quite sufficient. The flowers, by the above treatment, will be much larger, more double, and finer in color; where they are wanted to grow low and bushy, top them in June. They are in flower from the 1st of October until severe frost; thus beautifying our gardens at a season when they would be destitute of one single attraction. The following list we can admit as now unrivalled:

The finest new varieties, introduced last year from Europe, \$3 00 per dozen; all others, \$2 50 per dozen.

Large Flowered.

- Baron de Solomon--Rosy crimson, dark center.
 Erine--Violet, purple edged, dark center.
 Gil Blas--Golden yellow, rose spotted.

 Viscounte nova Rosea--Double, imbricated, streaked carmine.
 Walitohii--Imbricated carmine.
 Wodosia--Imbricated rose, very large flowered.

Pampas Grass--Gynerium Argentum.

This is a beautiful ornamental grass, with long linear leaves, four to five feet long, gracefully inclined on every side. Flowers in large silvery pikes, forming elegant plumes two feet long—with its gracefully drooping leaves, makes this a beautiful and striking object for ornamental purposes, while its rapid increase by tussocks, like the gama grass, promises to make it a valuable forage plant. It is a native of the Argentine republic. Price \$1 00 per plant.

Medicago Lupulina--Lemon Grass.

Resembles very much in leaves and foliage the Pampass Grass. The leaves give a delightful lemon perfume, requires slight protection in winter, but is rapidly increased by tussocks, when planted in the open ground in spring. Price 25 cents.
